Campuses for Environmental Stewardship is an interdisciplinary, replicable model that strengthens student learning outcomes to address environmental stewardship and enhance the STEM landscape through service-learning and community engaged projects.

During the seminar, participants will:

- learn from faculty members across Maine that have successfully implemented environmental and STEM service-learning courses;
- discover how cross-sector collaboration embeds environmental stewardship into the campus’ institution; and
- participate in a hands-on, STEM community-based learning project.

This model generates the development of 21st century skills, deepens the commitment to resolving environmental and STEM issues; and evokes behavioral change in both faculty and students.

Seminar Objectives:

Professional development opportunity for faculty, K-12 educators, graduate students

Faculty from across Maine will share STEM/environmental best practices

Learn basic framework for implementing an environmental and STEM service-learning project

Participants will partake in a community-based learning project

Lunch & Networking
