Introduction

The NSSE Survey (National Survey of Student Engagement) is annually administered by the Indiana University-Center for Postsecondary Research, to over 700 participating colleges and universities. The survey measures the student engagement in various important activities (in and out of the classroom) that are positively related to high levels of learning and personal development. Students are asked to report their engagement activities at the end of the academic year. This report shows the most recent survey results from the USM senior students who responded to the NSSE 2007, 2009, and 2011 surveys (i.e. Spring '07 graduates, Spring '09 graduates, and Spring '11 graduates). More specifically, the purpose of this report is to examine the items on the NSSE Survey which may be related to USM's General Education Outcomes. The outcomes are stated below, and the senior responses to the selected NSSE items are displayed in the following charts.

Vision, Goals, and Outcomes for General Education at USM

General education at USM is a coherent, integrative and rigorous liberal education that will enable our graduates to be world-minded, intentional, life-long learners. General education engages the academic community in substantive learning experiences that both illuminate and transcend the perspectives of various disciplines, and systematically foster the values, and dispositions knowledge, and skills essential for students to demonstrate:

Goal 1: Informed understandings of interrelationships between human cultures and the natural world

Goal 2: Analytical, contextual, and integrative thinking about complex issues

Goal 3: Effective communication using multiple forms of expression

Goal 4: Critical reflection upon, and informed action in, their roles as participants in multiple communities

Goal 5: Ethical action to contribute to the social and environmental welfare of local and global communities.

Brief Summary of Survey Data

According to the NSSE senior data, there were gradual increases in many academic engagement activities over the past few years. The recent seniors (2011) reported higher gains in their educational and personal growth development than previous seniors (2007). In addition, there were slightly higher percentages of the 2011 seniors, compared to the 2007 seniors, who reported engaging in high-level mental activities. On the downside, there was a decline in the percentage of seniors participating in a community project as part of their coursework; and slight decreases in the percentages of seniors who engaged in an internship or volunteer work.

The student feedback from these selected survey items can be a useful way to further examine the general education outcomes, and can give faculty some information about what senior students are reporting regarding their academic engagement at USM.
