ACCOUNTABILITY PROJECT

At each of your internship sites, you will engage in data collection to show that a counseling intervention is affecting student academics, attendance, or behavior. Utilizing Kaffenberger’s and Young’s (2013) Making Data Work, develop a plan for data collection.

Your plan should include:
- Goal(s) in SMART goal format
- A synopsis of data you will investigate before implementing your intervention
- A description of the intervention
- Any instruments used to collect data
- A description of data that will be collected (process, perception, and outcome data)
- Your timeline for planning and for collecting, analyzing, and sharing data

After you have collected data, prepare a presentation (no more than 15 minutes) to share your data analysis. Be prepared to answer questions.
