Ethics Education in Science and Engineering (EESE)

PROGRAM SOLICITATION
NSF 11-514

REPLACES DOCUMENT(S):
NSF 08-530

National Science Foundation
Directorate for Social, Behavioral & Economic Sciences
Division of Social and Economic Sciences
Directorate for Biological Sciences
Directorate for Computer & Information Science & Engineering
Directorate for Education & Human Resources
Directorate for Engineering
Directorate for Geosciences
Directorate for Mathematical & Physical Sciences
Office of International Science and Engineering

Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):
- March 14, 2011
- March 01, 2012
- March 01, 2013

IMPORTANT INFORMATION AND REVISION NOTES

A revised version of the NSF Proposal & Award Policies & Procedures Guide (PAPPG), NSF 11-1, was issued on October 1, 2010 and is effective for proposals submitted, or due, on or after January 18, 2011. Please be advised that the guidelines contained in NSF 11-1 apply to proposals submitted in response to this funding opportunity. Proposers who opt to submit prior to January 18, 2011, must also follow the guidelines contained in NSF 11-1.

Cost Sharing: The PAPPG has been revised to implement the National Science Board's recommendations regarding cost sharing. Inclusion of voluntary committed cost sharing is prohibited. In order to assess the scope of the project, all organizational resources necessary for the project must be described in the Facilities, Equipment and Other Resources section of the proposal. The description should be narrative in nature and must not include any quantifiable financial information. Mandatory cost sharing will only be required when explicitly authorized by the NSF Director. See the PAPP Guide Part I: Grant Proposal Guide (GPG) Chapter II.C.2.g(xi) for further information about the implementation of these recommendations.

Data Management Plan: The PAPPG contains a clarification of NSF's long standing data policy. All proposals must describe plans for data management and sharing of the products of research, or assert the absence of the need for such plans. FastLane will not permit submission of a proposal that is missing a Data Management Plan. The Data Management Plan will be reviewed as part of the intellectual merit or broader impacts of the proposal, or both, as appropriate. Links to data management requirements and plans relevant to specific Directorates, Offices, Divisions, Programs, or other NSF units are available on the NSF website at: http://www.nsf.gov/bfa/dias/policy/dmp.jsp. See Chapter II.C.2.j of the GPG for further information about the implementation of this requirement.

Postdoctoral Researcher Mentoring Plan: As a reminder, each proposal that requests funding to support postdoctoral researchers must include, as a supplementary document, a description of the mentoring activities that will be provided for such individuals. Please be advised that if required, FastLane will not permit submission of a proposal that is missing a Postdoctoral Researcher Mentoring Plan. See Chapter II.C.2.j of the GPG for further information about the implementation of this requirement.

SUMMARY OF PROGRAM REQUIREMENTS

General Information

Program Title:
Ethics Education in Science and Engineering (EESE)
Synopsis of Program:

The Ethics Education in Science and Engineering (EESE) program funds research and educational projects that improve ethics education in all fields of science and engineering that NSF supports, with priority consideration given to interdisciplinary, inter-institutional, and international contexts. Although the primary focus is on improving ethics education for graduate students in NSF-funded fields, the proposed programs may benefit advanced undergraduates as well.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Kelly Moore, 995.23 N, telephone: (703) 292-5026, email: kmoore@nsf.gov
- Myles Boylan, Program Director, Directorate for Education and Human Resources, Division of Graduate Education, 835 N, telephone: (703) 292-4617, fax: (703) 292-9015, email: mboylan@nsf.gov
- Tom Carruthers, Directorate for Mathematical & Physical Sciences, 1015 N, telephone: (703) 292-7373, email: tcarruth@nsf.gov
- Ephraim Glinert, Program Director, Directorate for Computer and Information Science and Engineering, Human Centered Computing Cluster, 1125 S, telephone: (703) 292-8930, fax: (703) 292-9073, email: eglinert@nsf.gov
- Jill Karsten, Program Director for Diversity and Education, Directorate for Geosciences, 705 N, telephone: (703) 292-7718, fax: (703) 292-9042, email: jkarsten@nsf.gov
- Susan C. Kemnitzer, Deputy Division Director, Directorate for Engineering, Engineering Education and Centers Division, 585 N, telephone: (703) 292-5347, email: skemnitz@nsf.gov
- Carter Kimsey, Program Manager, Directorate for Biological Sciences, 615 N, telephone: (703) 292-8470, fax: (703) 292-9063, email: ckimsey@nsf.gov
- Marshall M. Lih, Directorate for Engineering, 585 S, telephone: (703) 292-4608, email: mlih@nsf.gov
- Vanessa Richardson, Office of International Science and Engineering, telephone: (703) 292-5076, email: vrichard@nsf.gov
- Carol F. Stoel, Directorate for Education and Human Resources, telephone: (703) 292-8630, email: cstoel@nsf.gov

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):

- 47.041 --- Engineering
- 47.049 --- Mathematical and Physical Sciences
- 47.050 --- Geosciences
- 47.070 --- Computer and Information Science and Engineering
- 47.074 --- Biological Sciences
- 47.075 --- Social Behavioral and Economic Sciences
- 47.076 --- Education and Human Resources
- 47.079 --- Office of International Science and Engineering

Award Information

Anticipated Type of Award: Standard Grant

Estimated Number of Awards: 6 to 10

Anticipated Funding Amount: $3,000,000 subject to the availability of funds

Eligibility Information

Organization Limit:

Proposals may only be submitted by the following:

- Only colleges and universities located and accredited in the U.S. or U.S.-based professional associations are eligible to apply to this program. Other types of organizations can be included only as non-lead collaborators or sub-awardees. In addition, accredited U.S. colleges and universities and U.S. professional associations can be non-lead collaborators or sub-awardees.

PI Limit:

NSF expects project teams to include persons with appropriate expertise. This might include expertise in the domain or domains of science or engineering on which the project focuses, in ethics, in educational research, and in pedagogy.

Limit on Number of Proposals per Organization:

An eligible organization, as defined above, may submit only one proposal as the lead organization. Organizations submitting more than one proposal as the lead organization will be notified and given one week from notification to select one proposal for consideration. If one is not selected in that time period, all of those proposals will be returned without review. There is no limit on the number of proposals under which an organization may be included as a non-lead collaborator or sub-awardee.
Proposal Preparation and Submission Instructions

A. Proposal Preparation Instructions

- Letters of Intent: Not Applicable
- Preliminary Proposal Submission: Not Applicable
- Full Proposals:

B. Budgetary Information

- Cost Sharing Requirements: Inclusion of voluntary committed cost sharing is prohibited.
- Indirect Cost (F&A) Limitations: Not Applicable
- Other Budgetary Limitations: Other budgetary limitations apply. Please see the full text of this solicitation for further information.

C. Due Dates

- Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):
  - March 14, 2011
  - March 01, 2012
  - March 01, 2013

Proposal Review Information Criteria

Merit Review Criteria: National Science Board approved criteria. Additional merit review considerations apply. Please see the full text of this solicitation for further information.

Award Administration Information

Award Conditions: Standard NSF award conditions apply.

Reporting Requirements: Standard NSF reporting requirements apply.

I. INTRODUCTION

The 21st Century finds science and engineering facing increasingly complex and encompassing ethical and social issues. Science and engineering practices are also increasingly interdisciplinary and international, and operate in many organizational and societal contexts. Many professional associations are involved in developing codes of ethics, hosting conferences on ethical problems in research practice, or exploring relationships among science, engineering, and society. This diversity of interests creates a need for connections among the range of fields, disciplines, organizations, and situations in which these ethical concerns arise.

Prior research and educational activities related to ethics, supported through the National Science Foundation and other government and private agencies and organizations, provide a background from which to develop relevant theory and methods to improve ethics education in science and engineering and to provide better resources for organizations concerned with ethics in these fields. Building on the Foundation’s prior support for ethics-related research and program development, the NSF Directories for: Biological Sciences; Computer and Information Science and Engineering; Education and Human Resources; Engineering; Geosciences; Mathematical and Physical Sciences; Social, Behavioral and Economic Sciences, and the Office of International Science and Engineering have joined together to continue the Ethics Education in Science and Engineering (EESE) program.

Results of the EESE program will contribute to resources that institutions may utilize in complying with Sec 7009 of the America COMPETES Act (H.R. 2272), which requires institutions to “provide appropriate training oversight in the responsible and ethical conduct of research.” EESE awardees should also offer their findings and curriculum to the Ethics in Science, Mathematics, and Engineering Online Resource Center (Award# 1045412). The Ethics Online Resource Center aims to provide ethics curriculum, best practices for ethics education and training, encyclopedia entries, and other resources.

II. PROGRAM DESCRIPTION

The Ethics Education in Science and Engineering (EESE) program aims to deepen the understanding of ethical dilemmas in science and engineering, and provide cutting edge, effective research and educational materials to train the next generation of scientists and engineers. The ESES program accepts proposals for innovative research and educational projects to improve ethics education in all of the fields of science and engineering that NSF supports, including within interdisciplinary, inter-institutional and international contexts. Proposals must focus on improving ethics education for graduate students in those fields or on developing summer post-baccalaureate ethics-education activities or other activities that transition students from undergraduate to graduate education. The Principal Investigator team should be truly multi-disciplinary, and involve people with different disciplinary backgrounds.

The program will entertain proposals in graduate ethics education in science and engineering generally and will continue to support exploration of new ethical questions in engineering, biology, computer science, and other fields. Priority areas include but are not limited to:

- global/international challenges in science and engineering ethics;
- a general framework for the ethics of emerging technologies;
- issues of privacy and confidentiality in relation to data mining;
- fields for which there are few resources in ethics education or research;
- ethical issues related to robotics;
- intersection of the choices that society makes between natural resource development and utilization (e.g., energy sources) and environmental consequences;
- ethical issues associated with natural hazards, risk management, decision-making and the role of scientists in defining and negotiating the consequences of natural hazards in the face of scientific uncertainties.

Proposals should contribute to a theory of ethics education in science and engineering—one that addresses the individual motivators, societal incentives, and cultural beliefs that lead to ethical dilemmas. Many forms of expertise (e.g. philosophy, social science, engineering, life sciences) have contributed to the study of ethics in science and engineering. This diverse and often separate research provides an important empirical base that researchers can use to develop a theoretical approach to ethics education. The EESE program welcomes proposals that aim to contribute to theory building as part of the proposed research or education project.

The EESE program is interested in encouraging innovative research and education projects likely to create long-term improvement in ethics education for graduate students in science and engineering. EESE invites proposals for research projects, education projects, and combinations of the two.

Research projects that examine ethics education for graduate students in science and engineering are eligible for consideration in EESE. Research projects should suggest and explore creative, original, or potentially transformative concepts. Projects can include qualitative and/or quantitative approaches. The expectation is that project results will help in developing better ethics-education programs for graduate students; thus, proposals should specify plans to deliver findings to appropriate research and educational communities and assist them to implement projects or programs based on the findings. Research projects may also include a focus on ethical issues arising in educational research or in ethics education for graduate students. An example of such a context would be educating students with diverse cultural backgrounds. Proposals that focus on international topics should empirically explore different national practices, and not assume that one country's viewpoint or practices are superior to another.

Education projects must be based on research findings or theory that indicate successful ways to enhance ethics education for graduate students. They may include a wide range of activities such as mentoring programs, infrastructure-development activities, faculty capacity-building activities, training of postdoctoral fellows to implement programs, and graduate-student involvement in program development. The EESE program encourages applicants who think creatively about ethics education, and go well beyond standard approaches such as developing online modules, providing students with a series of scenarios and having a discussion
about them, or holding workshops and seminars with invited speakers, and then asking students to rate the activities on a survey form. Projects to develop and test creative, new materials or tools or teaching techniques are also eligible. Such materials or tools should go beyond existing materials; they should take ethics education into new pedagogical strategies or topics.

A common, often-effective approach in educational projects is to develop graduate-student programs. Another approach may focus on improving the ability of faculty to mentor students or create ethics-education programs and materials in collaboration with graduate students. A national or international training activity for graduate students would be yet another appropriate strategy.

EESE education projects should test the feasibility and effectiveness of their activities or programs in more than one institution, incorporate ways to diffuse project activities even further, and evaluate project effectiveness, including assessment of expected student outcomes. Proposals are expected to include substantial and persuasive information about how this will be done. Proposals should specify plans to disseminate findings widely. Collaborations with appropriate professional associations are encouraged in this regard.

Proposals may also combine research and education components. For instance, the first year of a project might examine ethics education for graduate students in a scientific or engineering field. The second year might implement programs on several campuses based on what was discovered. Repetition and modification, evaluation and diffusion might occur during the third year.

EESE awardees should also offer their findings and curriculum to the Ethics in Science, Mathematics, and Engineering Online Resource Center. The Ethics Online Resource (NSF Award#1045412) aims to provide ethics curriculum, best practices for ethics education and training, encyclopedia entries, and other resources.

Note: NSF does not consider proposals for medical research. The EESE program will not consider proposals focused on ethics for medical students or in medical education. The EESE program does, however, encourage proposals that address ethical issues related to medical informatics or systems engineering. EESE will not consider proposals that will start or provide incremental improvements to formal or informal educational activities responsive to Federal mandates for research integrity or human-subjects training requirements.

III. AWARD INFORMATION

Estimated program budget, number of awards and average award size/duration are subject to the availability of funds. The maximum award amount is $300,000. Collaborative proposals for the purpose of disseminating best practices in graduate ethics education will be eligible for a maximum award amount of $400,000 (for example, projects that include partnerships between universities and scientific or engineering societies to distribute curriculum and/or research findings). Anticipated funding amount is $3 million for an estimated 6 to 10 Standard Grants. The maximum award duration is 36 months.

IV. ELIGIBILITY INFORMATION

Organization Limit:

Proposals may only be submitted by the following:

- Only colleges and universities located and accredited in the U.S. or U.S.-based professional associations are eligible to apply to this program. Other types of organizations can be included only as non-lead collaborators or sub-awardees. In addition, accredited U.S. colleges and universities and U.S. professional associations can be non-lead collaborators or sub-awardees.

PI Limit:

NSF expects project teams to include persons with appropriate expertise. This might include expertise in the domain or domains of science or engineering on which the project focuses, in ethics, in educational research, and in pedagogy.

Limit on Number of Proposals per Organization:

An eligible organization, as defined above, may submit only one proposal as the lead organization. Organizations submitting more than one proposal as the lead organization will be notified and given one week from notification to select one proposal for consideration. If one is not selected in that time period, all of those proposals will be returned without review. There is no limit on the number of proposals under which an organization may be included as a non-lead collaborator or sub-awardee.

Limit on Number of Proposals per PI:

None Specified

V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions
In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. Chapter II, Section D.4 of the Grant Proposal Guide provides additional information on collaborative proposals.

Applicants should read carefully the Introduction, Program Description, and Additional Review Criteria sections of this solicitation, to ensure that their proposals are responsive to program requirements. In addition, they should attend to the following instructions:

The brief project summary must describe the goals and methods of the project. It should indicate at the beginning whether the proposal is for an education project or a research project, or a combination of the two. It should contain specific paragraphs with headings on the Intellectual Merit and Broader Impacts of the project. National Science Board policy demands that proposals that do not discuss these two criteria explicitly be returned without review.

The project description must include:

1) a project rationale. This should include a synopsis of the research literature or findings on which the project will draw, or which it will test, with appropriate citations. Education projects should briefly document current practices in ethics education at the proposing institution(s).

2) a project plan. For education projects, this should include the overall project goals, methods, strategies, recruitment and activities; plans for testing project results at more than one institution; and plans for evaluation and assessment. For research projects, this should include a description of the research question(s) to be investigated and the possible impact of findings on ethics education for graduate students in science or engineering, and a research plan describing methods and activities appropriate to answering the research question(s).

3) an evaluation plan, for education and combined education/research projects only. This should include a description of how the effectiveness of the proposed education project will be measured, including the criteria and indicators that will be used. Researchers may consult The 2002 User-Friendly Handbook for Project Evaluation.

4) a list of key personnel. This should include descriptions of the duties and responsibilities of senior personnel and any others critical to project success. Projects may involve diverse sets of participants. Project teams will usually include faculty with disciplinary or cross-disciplinary content and expertise in educational methodologies or pedagogy. Biographical sketches and letters of commitment should be provided for all key personnel, collaborators, consultants, and others playing substantive roles in the project. Graduate students should be involved as project assistants as well as recipients of program activities or subjects of research. Projects that develop activities involving underrepresented groups in science and engineering are particularly encouraged. Discussion of prior related work of the PI(s) should include results of previous funding.

5) a project management plan. A description, table, or diagram should specify project tasks, completion dates, and identify the responsible personnel that should be included. A monthly schedule with indications, for example, of meetings of project personnel or scheduled student seminars, helps to demonstrate that the plan is well thought out.

6) appropriate plans for dissemination of results. This should include plans for assistance to relevant research and educational communities in their adoption and adaptation. All projects must have a dissemination plan to deliver findings to professional peers and appropriate research and educational communities. Applicants should provide detailed information about how models or findings from the projects will be diffused and assistance provided in their adoption or adaptation, as appropriate. All projects are expected to make resources developed through the ESEE program accessible online through such portals as the National STEM Digital Library.

7) a list of any partnering organizations. The roles of any cooperating organizations or institutions should be described. All proposals should include letters from any project partners or cooperating organizations, and from research or educational program sites, documenting collaborative arrangements. These letters should be provided in the Supplementary Documentation section of the proposal.

8) sustainability plan. Education projects should describe how the ethics education activities will be continued after the grant period. Letters of support from institution(s) will be accepted if administrators describe in detail how the longer-term institutionalization of ESEE activities will occur (for example, if a newly required course will be added to the catalog).

An important reminder about research with human subjects: Research involving human subjects must either have approval from the organization's Institutional Review Board (IRB) before issuance of an NSF award, or identify the applicable subsection exempting the proposal from IRB review. This requirement is in the Common Rule (Federal Policy for the Protection of Human Subjects, 45 CFR Section 690). See the NSF Grant Proposal Guide for more details. The NSF proposal cover sheet requires provision of the relevant information, as appropriate.

Other General Information

Experience indicates that proposals do better in review if they include specific information on such components as how often project team meetings are scheduled, how many seminars or other educational activities are expected to occur, who is responsible for what
aspects of the project, and how project success will be gauged. Strong proposals specify the pedagogical standards that will be used in project activities and assessment. They involve graduate students as assistants for the project. As appropriate, they address plans to integrate teaching and research and to modify the project as needed.

EESE will not accept videotapes, diskettes, textbooks, CD-ROMs, or any other materials as part of proposal packages.

Investigators wishing to apply for support are encouraged to discuss their ideas with one of the contacts listed in the solicitation.

**B. Budgetary Information**

**Cost Sharing:** Inclusion of voluntary committed cost sharing is prohibited

**Other Budgetary Limitations:** The maximum award amount is expected to be $300,000 inclusive of indirect costs; maximum duration is expected to be 36 months. Projects that include partnerships (for example, between universities and scientific societies) for the purpose of disseminating best practices in graduate ethics education will be eligible for a maximum award amount of $400,000.

**Budget Preparation Instructions:** Funds for the principal investigator or an appropriate designee to attend two meetings, at NSF or another appropriate venue, for discussion and interaction with other awardees, must be included.

**C. Due Dates**

- **Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):**
  - March 14, 2011
  - March 01, 2012
  - March 01, 2013

**D. FastLane/Grants.gov Requirements**

- **For Proposals Submitted Via FastLane:**
  
  Detailed technical instructions regarding the technical aspects of preparation and submission via FastLane are available at: [https://www.fastlane.nsf.gov/a1/newstan.htm](https://www.fastlane.nsf.gov/a1/newstan.htm). For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

  **Submission of Electronically Signed Cover Sheets.** The Authorized Organizational Representative (AOR) must electronically sign the proposal Cover Sheet to submit the required proposal certifications (see Chapter II, Section C of the Grant Proposal Guide for a listing of the certifications). The AOR must provide the required electronic certifications within five working days following the electronic submission of the proposal. Further instructions regarding this process are available on the FastLane Website at: [https://www.fastlane.nsf.gov/fastlane.jsp](https://www.fastlane.nsf.gov/fastlane.jsp).

- **For Proposals Submitted Via Grants.gov:**

  Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage: [http://www07.grants.gov/applicants/app_help_reso.jsp](http://www07.grants.gov/applicants/app_help_reso.jsp). In addition, the NSF Grants.gov Application Guide provides additional technical guidance regarding preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

  **Submitting the Proposal:** Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

**VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES**

Proposals received by NSF are assigned to the appropriate NSF program where they will be reviewed if they meet NSF proposal preparation requirements. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with the oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal.
A. NSF Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board (NSB)-approved merit review criteria: intellectual merit and the broader impacts of the proposed effort. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two NSB-approved merit review criteria are listed below. The criteria include considerations that help define them. These considerations are suggestions and not all will apply to any given proposal. While proposers must address both merit review criteria, reviewers will be asked to address only those considerations that are relevant to the proposal being considered and for which the reviewer is qualified to make judgements.

What is the intellectual merit of the proposed activity?
How important is the proposed activity to advancing knowledge and understanding within its own field or across different fields? How well qualified is the proposer (individual or team) to conduct the project? (If appropriate, the reviewer will comment on the quality of the prior work.) To what extent does the proposed activity suggest and explore creative, original, or potentially transformative concepts? How well conceived and organized is the proposed activity? Is there sufficient access to resources?

What are the broader impacts of the proposed activity?
How well does the activity advance discovery and understanding while promoting teaching, training, and learning? How well does the proposed activity broaden the participation of underrepresented groups (e.g., gender, ethnicity, disability, geographic, etc.)? To what extent will it enhance the infrastructure for research and education, such as facilities, instrumentation, networks, and partnerships? Will the results be disseminated broadly to enhance scientific and technological understanding? What may be the benefits of the proposed activity to society?

Mentoring activities provided to postdoctoral researchers supported on the project, as described in a one-page supplementary document, will be evaluated under the Broader Impacts criterion.

NSF staff also will give careful consideration to the following in making funding decisions:

Integration of Research and Education
One of the principal strategies in support of NSF’s goals is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions provide abundant opportunities where individuals may concurrently assume responsibilities as researchers, educators, and students and where all can engage in joint efforts that infuse education with the excitement of discovery and enrich research through the diversity of learning perspectives.

Integrating Diversity into NSF Programs, Projects, and Activities
Broadening opportunities and enabling the participation of all citizens -- women and men, underrepresented minorities, and persons with disabilities -- is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

Additional Review Criteria:
Reviewers will be asked to apply several special criteria to all proposals in this program:

1. Is this an innovative effort? Is it likely to create long-term improvement in ethics education for graduate students in science or engineering?
2. Does the project include adequate grounding in the relevant research literatures? Does it include relevant multi-disciplinary collaboration?
3. Do potential results have promise for broad utility? Is there a feasible plan for widespread dissemination, adoption or adaptation?
4. Are there adequate supporting materials to document commitment from those individuals and institutions playing a substantive role in the project?
5. For proposals involving international collaborations, does the project involve mutual benefits, true intellectual collaboration with the foreign partner(s), benefits to be realized from the expertise and specialized skills, facilities, sites and/ or resources of the international counterpart, and active research engagement of U.S. students and early-career researchers, where such individuals are engaged in the research?

For education proposals, and those combining research and education, additional special criteria are:

1. Does the proposal include appropriate plans to test results beyond one institution?
2. Does the proposal include well-formulated, feasible plans for evaluation of effectiveness?

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to formulate a recommendation to either support or decline each proposal. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF is striving to be able to tell applicants whether their proposals have been declined or recommended for funding within six months. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director accepts the Program Officer's recommendation.

A summary rating and accompanying narrative will be completed and submitted by each reviewer. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.
In all cases, after programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements for review of business, financial, and policy implications and the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

VII. AWARD ADMINISTRATION INFORMATION

A. Notification of the Award

Notification of the award is made to the submitting organization by a Grants Officer in the Division of Grants and Agreements. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process.)

B. Award Conditions

An NSF award consists of: (1) the award letter, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award letter; (4) the applicable award conditions, such as Grant General Conditions (GC-1); * or Research Terms and Conditions * and (5) any announcement or other NSF issuance that may be incorporated by reference in the award letter. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF's Website at http://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF. Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer at least 90 days before the end of the current budget period. (Some programs or awards require more frequent project reports). Within 90 days after expiration of a grant, the PI also is required to submit a final project report, and a project outcomes report for the general public. Failure to provide the required annual or final project reports, or the project outcomes report will delay NSF review and processing of any future funding increments as well as any pending proposals for that PI. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF’s electronic project-reporting system, available through FastLane, for preparation and submission of annual and final project reports. Such reports provide information on activities and findings, project participants (individual and organizational), publications, and other specific products and contributions. PIs will not be required to re-enter information previously provided, either with a proposal or in earlier updates using the electronic system. Submission of the report via FastLane constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

VIII. AGENCY CONTACTS

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Kelly Moore, 995.23 N, telephone: (703) 292-5026, email: kmoore@nsf.gov
- Myles Boylan, Program Director, Directorate for Education and Human Resources, Division of Graduate Education, 835 N, telephone: (703) 292-4617, fax: (703) 292-8015, email: mboylan@nsf.gov
- Tom Carruthers, Directorate for Mathematical & Physical Sciences, 1015 N, telephone: (703) 292-7373, email: tcarruth@nsf.gov
Ephraim Gilnert, Program Director, Directorate for Computer and Information Science and Engineering, Human Centered Computing Cluster, 1125 S, telephone: (703) 292-8930, fax: (703) 292-9073, email: egilnert@nsf.gov

Jill Karsten, Program Director for Diversity and Education, Directorate for Geosciences, 705 N, telephone: (703) 292-7718, fax: (703) 292-9042, email: jkarsten@nsf.gov

Susan C. Kemnitzer, Deputy Division Director, Directorate for Engineering, Engineering Education and Centers Division, 585 N, telephone: (703) 292-5347, email: skemnitz@nsf.gov

Carter Kimsey, Program Manager, Directorate for Biological Sciences, 615 N, telephone: (703) 292-8470, fax: (703) 292-9063, email: ckimsey@nsf.gov

Marshall M. Lih, Directorate for Engineering, 565 S, telephone: (703) 292-4608, email: mlih@nsf.gov

Vanessa Richardson, Office of International Science and Engineering, telephone: (703) 292-5076, email: vrichard@nsf.gov

Carol F. Stoel, Directorate for Education and Human Resources, telephone: (703) 292-8630, email: cstoel@nsf.gov

For questions related to the use of FastLane, contact:

- FastLane Help Desk, telephone: 1-800-673-6188; e-mail: fastlane@nsf.gov.

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. OTHER INFORMATION

The NSF Website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this Website by potential proposers is strongly encouraged. In addition, National Science Foundation Update is a free e-mail subscription service designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Regional Grants Conferences. Subscribers are informed through e-mail when new publications are issued that match their identified interests. Users can subscribe to this service by clicking the "Get NSF Updates by Email" link on the NSF web site.

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this new mechanism. Further information on Grants.gov may be obtained at http://www.grants.gov.

ABOUT THE NATIONAL SCIENCE FOUNDATION

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 40,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See Grant Proposal Guide Chapter II, Section D.2 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at http://www.nsf.gov

PRIVACY ACT AND PUBLIC BURDEN STATEMENTS

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, NSF-50, "Principal Investigator/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004), and NSF-51, "Reviewer/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Division of Administrative Services
National Science Foundation
Arlington, VA 22230
